Measurably reduce human cyber risk

Prevent human-related breaches with regular risk assessments and targeted user training.

With humans playing a part in 74% of today's breaches, modern businesses are struggling to dedicate sufficient resources to combat evolving cyber threats, human error, and misuse of corporate data. Our managed HRM service offers the full solution...

End-to-end human risk management – managed for you

Drive security awareness

Assess and strengthen each user's security knowledge gaps through regular, bite-sized training courses that are prioritised based on their risk areas.

Boost phishing resilience

Identify which employees are susceptible to sophisticated and common phishing attacks through periodic simulations, and educate those who show high risk.

Monitor stolen credentials

Safeguard exposed user accounts that could be used to launch targeted attacks by monitoring the dark web for stolen credentials (such as passwords).

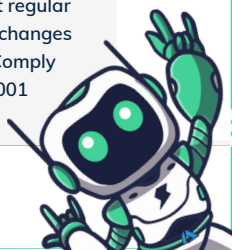

Simplify policy processes

Keep users well-versed on security policies and procedures by requesting and tracking eSignature approvals from a pre-loaded library of core documents.

Evaluate human risk. Educate your people. Calculate the impact.

Instead of one-size-fits-all user training, our HRM service evaluates each employees' security knowledge gaps to create tailored training journeys – continuously reinforcing your security culture through measurable assessments, risk-adapted training and engaging micro-learning.

- **Save time** – Automate course enrolment and reminders
- **Cover the essentials** – Train users on modern threats and standards
- **Understand the impact** – Get regular reports detailing human risk changes
- **Demonstrate compliance** – Comply with frameworks like ISO 27001
