Service overview:

CyberSecurity

Introducing the ‘Cyber Security’ service portfolio

Defend your most vital business assets, protect your team + stay productive with the labdesk cyber security stack.

labdesk.co.uk

labdesk

Is your team + data secure?

In 2022, 85% of IT leaders using reported data loss incidents – this number is on the rise.

Introducing labdesk's cutting-edge Cyber Security Services – your first line of defence against the ever-evolving landscape of digital threats. In an era where technology is seamlessly integrated into daily business operations, safeguarding your sensitive data is non-negotiable. Our cyber security solutions are designed to fortify your digital infrastructure, ensuring that your business remains resilient in the face of potential cyber threats.

In today's digital world, the absence of robust cyber security measures poses severe risks to businesses. Without proper protection, sensitive customer information, proprietary data, and critical business operations are vulnerable to malicious attacks. The consequences of a cyber breach extend beyond mere data compromise; they encompass reputational damage, financial losses, and potential legal ramifications.

labdesk's Cyber Security Services offer peace of mind, empowering you to focus on your core business activities while we proactively shield your digital assets from the escalating cyber threats that could otherwise jeopardize your company's success.

Security Vulnerabilities

Incomplete implementation of security features may leave your organisation vulnerable to cyber threats. For example, not using Advanced Threat Protection (ATP) or other security measures could increase the risk of malware and phishing attacks.

Data Loss and Leakage

Failure to implement data protection features, such as Data Loss Prevention (DLP), may expose the business to the risk of sensitive data being unintentionally shared or leaked, leading to regulatory compliance issues and reputational damage.

Identity and Access Risks

Inadequate implementation of identity and access management features, like Multi-Factor Authentication (MFA) or Conditional Access, could result in unauthorised access to sensitive information and compromise user accounts. Lack of MS365 policy or poor policy management is often a leading cause of access risk.

Collaboration and Productivity impact

Businesses may miss out on the full potential of collaboration and productivity if they do not fully implement key MS365 features. This can impact communication, collaboration, and cause overall in-efficiency.

labdesk core Cyber Security services

Defend your most vital business assets, protect your team + stay productive...

Cyber Essentials + Security accreditations

Cyber Essentials is a Government backed and industry supported scheme assisting businesses in protecting themselves against the ever-growing threat of cyber-attacks, and provides you certification demonstrating to your business partners, customers and regulators that you take cyber security seriously..

Security audits + consultancy

labdesk provide a range of services to measure, manage and control Cyber Risk within your organisation. Our Cyber Security Consultancy services align to leading industry standards from both NCSC (National Centre for Cyber Security), NIST and SANS, enabling us to identify the most appropriate Cyber Security Framework for your business size and vertical.

Penetration Testing

Penetration testing helps organisations identify vulnerabilities that could be exploited by an attacker to access sensitive data, such as customer information or financial records. Organisations that don't regularly perform penetration testing often face challenges in protecting sensitive data and systems, maintaining compliance and customer trust, and reducing the risk of a successful cyber-attack.

Managed Cyber Security

The labdesk service has been designed to provide a comprehensive fully Managed Cyber Security service, allowing partners to have a strong internal Cyber Security capability without the usual associated costs. The labdesk cyber offering combines internationally recognised security standards with best of breed training and technology platforms to keep your business safe from cyber criminals.

Cyber Security Training

Technology alone isn't enough to safeguard your business! Cyber criminals are targeting your teams – via email, sms, telephone and social engineering techniques. They are targeting users in addition to networks and web applications with the threats becoming harder to stop. With an effective security awareness training solution, you can reduce your risk and transform your users into a solid first line of defence for identifying, avoiding and reporting sophisticated attacks.

Vulnerability Scanning

Finding Vulnerabilities in your network is a never-ending process and Organisations should be performing regular vulnerability scans in order to be aware of the threats. To defend your business-critical assets, it's vital to identify and respond to security vulnerabilities before cyber criminals can find.....and exploit them. We intelligently analyse and correlate these results from our scanning tools with open-source information about the current status of vulnerabilities and produce a clear and concise Monthly Report with full details including a remediation plan.

Dark Web Monitoring

Are your company's user credentials on the dark web? Thousands of email addresses, passwords and other sensitive data land on the dark web every day, creating risk for your business — and you may not even know about a vulnerability until it's too late. We uncover your compromised credentials in Dark Web markets, data dumps and other sources, and alert you to trouble fast, giving you the advantage to act before cybercriminals do.

Cyber Technology - EDR | SOC

Teams are undergoing major transformation as they move their information from on-premise systems to Cloud Services such as Office 365, Microsoft Azure and hybrid environments to increase mobile workforce productivity, improve operational agility, and lower costs. The labdesk managed cyber stack can keep your team safe with cyber services including EDR (Endpoint detection & response) & SOC (security operations centre)

Cyber Essentials

Cyber Essentials helps you to guard your organisation against cyber-attack.

What is Cyber Essentials?

Cyber Essentials is a Government backed and industry supported scheme assisting businesses in protecting themselves against the ever-growing threat of cyber-attacks, and provides you certification demonstrating to your business partners, customers and regulators that you take cyber security seriously.

There are two levels of certification:

Cyber Essentials
Our self-assessment option gives you protection against a wide variety of the most common cyber-attacks. This is important because vulnerability to basic attacks can mark you out as target for more in-depth unwanted attention from cyber criminals and others.

Certification gives you peace of mind that your defences will protect against the vast majority of common cyber-attacks simply because these attacks are looking for targets which do not have the Cyber Essentials technical controls in place.

Cyber Essentials shows you how to address those basics and prevent the most common attacks.

Cyber Essentials Plus
Cyber Essentials Plus still has the Cyber Essentials trademark simplicity of approach, and the protections you need to put in place are the same, but for Cyber Essentials Plus a hands-on technical verification is carried out.

Why should all businesses have Cyber Essentials?

- Reassure customers that you are working to secure your IT against cyber attack
- Attract new business with the promise you have cyber security measures in place
- You have a clear picture of your organisation's cyber security level
- Some Government contracts require Cyber Essentials certification

Want to get certified?

The labdesk team can help you review your current security posture, carry out a Cyber Essentials readiness assessment and support you all the way through to helping you attain the accreditation (and staying compliant throughout the year).

labdesk Cyber Security – secure by design

Who should take advantage of the labdesk Security Services?

IT Managers, IT administrators, Technical Leaders + IT Teams

If you're an IT manager or internal IT team, then the labdesk cyber services will compliment your existing skillset, resource, and environment. Simplifying central management, enhancing the security, and improving compliance –

Giving you the confidence the environments under your control are in safe hands.

Business Owners / Leaders + Managers

If you're a business owner, leader, or manager then the labdesk cyber offering will give you peace of mind that you are maximising your IT investment, whilst ensuring security is closely monitored, maintained and enhanced.

Managed IT Partners (MSP's) / Telecoms Providers

If you already have an IT Partner / MSP you can still take advantage of the labdesk cyber services. The services have been curated as a product set to complement existing IT environments. This means they can be consumed as a managed service or as a product set if you already have a partner in place that provides your managed IT.

We can deliver the labdesk cyber services as a standalone service to bolster and protect your existing environment (working in partnership with your exiting IT partner).

Innovative Teams + Sector's

If you work and operate within an innovative sector where compliance is key, the labdesk cyber security services will optimise your IT experience and improve your compliance, all whilst keeping your team happy and productive.

Sector examples: Clean energy, science, aerospace, Engineering

Compliance / Security Managers / Facility Teams / Operations

The labdesk cyber security services allows security professionals to focus on their job, giving piece of mind knowing that the labdesk team are monitoring and managing security services + policies keeping them compliant.

Stay in constant compliance with industry standard's such as Cyber Essentials.

...innovative teams making an impact

labdesk

What's in it for you and your team?

Let's get more out of your technology and protect your team...

Maximise Your Investment in Technology

Unlock the full potential of your technology investment with labdesk's comprehensive suite of tools and services.

- Protect teams, data and 'IP'
- Boost team productivity
- Reduce threats + downtime
- Monitor + maintain compliance

Reduce Vulnerabilities and Security Risks ☑

Bolster your defences against cyber threats. labdesk enhances your security posture, reducing vulnerabilities and safeguarding your business from potential risks.
